

LIGHTSPEED

LightSpeed™ is our Real Time deterministic monitoring and control system for dynamometers. Included with the LightSpeed™ hardware is a signal interface that can accept/condition signals from any type of sensor available today.

The standard configurations include signal conditioning for speed, torque, multiple temperature type and pressure sensors. LightSpeed™ is intuitive, scalable and customizable to accommodate even the most extreme testing needs for the fraction of the cost when compared to other similar products.

From automated tests to alarm settings and actions, from simple printout reports to automatically reporting via email and distribution lists, from remote assistance and updates to controlling the most demanding applications from a different continent, LightSpeed™ makes it possible with just a few mouse clicks. LightSpeed™ comes equipped with the latest proven IT technology (PC, monitor and peripherals).
