

## **Sensor Interface Module**

The Phoenix Dynamometer Sensor Interface Module (SIM) provides an interface to all transducer types available today. Basic standard configurations below include but are not limited to pressure and temperature sensors.

- 2 Pressure and 2 Temperature Channels
- 2 Pressure and 4 Temperature Channels
- 4 Pressure and 4 Temperature Channels
- 8 Pressure and 8 Temperature Channels
- 8 Pressure and 32 Temperature Channels

If these standard channel configurations are not an exact match for your specific needs, you can ask us for any "custom channel configuration". Feel free to mix and match channel options to custom tailor a system for your unique application.
